

**AMENDMENTS TO THE SPECIFICATION**

Please amend the paragraph of the specification starting at page 18, line 14 as follows:

FIGS. 3a to ~~4-3d~~ show a powder inhaler with a revolver magazine in which the capsule according to the invention can be used.

Please amend the paragraph of the specification starting at page 20, line 25 as follows:

In order to prepare the inhaler, with the revolver magazine (14) in place, this magazine is rotated so that one of the chambers (4) is brought into a position in which the bore (22) in the base or the conical recess (23) is aligned coaxially with the air inlet opening (25). The positioning of the chamber (4) is made easier by the engagement of the locking bolt (24) in the recess (23). After the bolt has engaged, the air inlet opening (25) and the base opening (22) in the chamber (4) are in alignment. The cap of the capsule is positioned on the base opening (22) and closes it off. By actuation of the button ~~(18)~~ counter to the force of a spring (9) the cutting edges (20) are moved radially towards the chamber (4), first piercing the weakened regions (21) or entering corresponding openings in the side wall of the revolver magazine and finally opening the capsule at the top and bottom close to its ends. The tapering caps of the capsules should not be destroyed as they are intended to act as a kind of valve.
